# CHOOSE A RELIABLE SUPPLIER FOR A SECURE INVESTMENT

REC TwinPeak 2S 72 Series panel

## REC Group – a global leader

REC Group (REC) is a leading European brand of solar panels. With two decades of experience, REC is a demonstrated long-term player in the solar industry.

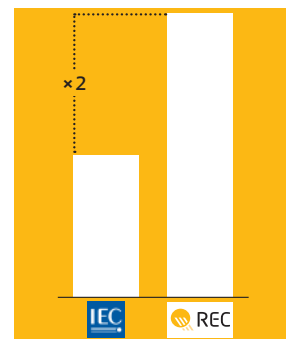

Founded in 1996, REC is headquartered in Norway and employs 2,000 people world-wide with offices and partnerships in place to help meet the world's growing energy needs.

At the end of 2016, REC had produced around 26 million panels, amounting to 6.3 GW of clean energy installed for various applications coast to coast in the US and around the world. In today's competitive solar market with import duties on some products, you can be assured that REC panels imported to the USA are 100% made in Singapore.

## Quality beyond expectations

REC products and production processes are certified according to multiple global and regional industry standards, consistently performing well in certification tests.

REC's internal testing and qualification processes are twice as stringent as those of IEC (International Electrotechnical Commission), which are considered industry standards. This extreme testing ensures panels can perform in the most severe environments, ensuring increased reliability. As a result, REC panels are widely recognized for setting industry benchmarks for high product quality.

REC's internal quality tests are twice as stringent as industry standards

Evans Family Home - 13.4 kW - 19,435 kWh/year - 19,526 REC solar panels - Monterey, California - by REC Solar Inc.

# CHOOSE PROVEN SOLAR PANELS TO DELIVER REAL RETURNS

## In perspective:

Fewer than 400 from approximately 4 million REC panels manufactured each year come back from the field with claims.

## Low claims, high security

The high quality of REC panels is further supported by the very low claims rate. REC's automated production is state of the art, comparable to automotive industry standards. The high level of automation ensures consistent high quality output.

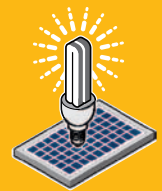

To put this in perspective, out of approximately 4 million panels manufactured on a yearly basis, less than 400 return to REC from the field.

## A protected investment

REC panels come standard with comprehensive product and power output warranties. The 25-year linear power output warranty ensures that REC solar panels will perform exactly as they are expected to – every year for 25 years. In addition, the solar panels come with a product warranty for ten full years. Together, the warranties provide value-adding security you can depend on.

The promise of linear power output combined with high product quality provide greater ROI predictability and enable you to best plan your investment. With REC's warranties, you gain:

- Greater return on investment predictability
- Increased investment security
- Guaranteed high product quality

## Attractiveness of self consumption solar:

- Declining investment costs
- Stable electricity output
- Environmentally friendly
- Significant bills savings
- Quicker payback times

## Using solar for self consumption

With declining investment costs, stable electricity output and quicker payback times, producing solar energy for the self consumption is growing in popularity, contributing to the financial gains and energy independence of American families and businesses.

REC is a thought leader on self consumption, having conducted several in-depth studies on the topic. Also, REC panels are used in many high-profile self-consumption installations.

Rockville Solar II - 3.2MW - 4.3million kWh/year - 12,264 REC solar panels - Indianapolis, Indiana - by Melink Corp.

# CHOOSE A STRONG BRAND WITH STRONG VALUES

## Strong brand with strong values

REC is a respected brand in the global solar industry with a focus on partnership – with a demonstrated commitment to project developers, distributors, installers, and end customers. This approach directly supports REC's vision:  
We want every person to benefit from electricity directly from the sun.

This mentality is lived by REC's four values:

- We are Responsible
- We are Experienced
- We are Collaborative
- We are Straightforward

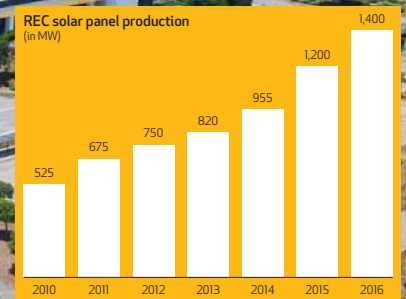

REC's solar panel production in Singapore received a Solar Industry Award for Module Manufacturing Innovation.

## Repeatable high quality

Processes such as RBS (REC Business System) and RPDM (REC Product Development Model) are rigidly followed to ensure that all REC panels consistently have the highest quality, wherever they are produced. This repeatable high quality is synonymous with the REC brand. Output steadily increases to meet the growing demand for REC panels.

REC's state-of-the-art manufacturing facility in Tuas, Singapore.
